### What is Cybersecurity?

What is Cybersecurity? Cybersecurity is the practice of protecting systems, networks, and programs from digital attacks. These attacks are aimed at obtaining unauthorized access to confidential data, with the intent to steal or destroy the confidential information and its usefulness. Sometimes the target is the data itself (e.g., financial records or state secrets), sometimes the goal is to disrupt the flow of information (e.g., a denial-of-service attack on a website), and sometimes the attacker's intent is to damage the reputation of the target (e.g., a phishing attack on a company's email system). Cybersecurity is a multidisciplinary field that involves a combination of technology, policy, and human factors. It is a constantly evolving field, as new threats and attack vectors are discovered. Cybersecurity is a critical part of protecting our digital lives and our society.
